Full Stack Developer with hands-on experience building responsive web applications using HTML, CSS, JavaScript, React.js and Python. Experienced in developing dynamic front-end interfaces, building static and dynamic websites, integrating AI-powered messaging features and working with cloud fundamentals on AWS. Passionate about building clean, user-friendly software and continuously growing towards becoming a well-rounded full-stack developer.

Technical Skills

Programming: — Python | HTML | CSS | JavaScript | C | SQL

Frameworks: — React.js | Bootstrap

Computer Vision / Graphics: — MediaPipe Hands | HTML5 Canvas API | Real-time gesture tracking

Cloud: — AWS (EC2, S3, Lambda)

Tools — Git | GitHub

Domain: — Full Stack Development | Web Development | AI Development

Professional Experience

READ Automation, Web Development Intern

Jun 2025 – Jul 2025 | Remote

- Built a dynamic school web interface using HTML, CSS and React, focusing on responsive layout and clean navigation.
- Developed a static corporate website using HTML, CSS and PHP, and implemented a Gemini-based smart messaging feature to handle user queries.
- Gained hands-on experience across the web development lifecycle, from UI design to implementation and testing.
- Collaborated with the team to translate design requirements into functional, user-friendly web pages.

Projects

1. Aerograph — Draw Type With Your Hand

- Developed a browser-based hand-tracking application that lets users draw and “type” letters in the air using natural hand gestures.
- Implemented real-time gesture recognition with MediaPipe Hands to track finger position and trace strokes as the user draws.
- Built an interactive canvas that captures traced letters as tiles on a live specimen sheet, styled with a custom ink-and-seal themed UI.
- Designed custom interactive controls (seal-style buttons) for actions like confirm, menu and scroll navigation.

2. SignalHand — Personalized ISL Translator (self-trained, two-way) — *Ongoing*

- Building a personalised, self-trained Indian Sign Language (ISL) translator that supports two-way communication between signers and non-signers.
- Using MediaPipe Hands for real-time hand-landmark tracking in the browser, paired with TensorFlow.js to train and run a custom gesture-recognition model.
- Integrating Three.js for interactive visual feedback, with live confidence scoring to show how closely a sign matches the trained gesture.
- Designing a guided, tab-based workflow that walks the user through capturing signs, training the model and running live translation.

Education

Bachelor of Engineering in Computer Science Engineering

KCG COLLEGE OF TECHNOLOGY

2023 – 2027 | Chennai, India

CGPA: 8.31

Senior Secondary, Doveton Girls' Higher Secondary School 2022 – 2023 | Chennai, India

Board exam result: 88%

Achievements & Certifications

- Hack The Horizon – AI Hackathon, VIT Chennai (August 2024)
- Cisco – CCNA: Switching, Routing, and Wireless Essentials
- Cisco – Apply AI: Analyze Customer Reviews
- NCVET Skill Competition Certificate – AIML
- Cisco – Introduction to Data Science
- Cisco – Introduction to Modern AI
